

YOUSIF BADR

Product Designer | Arabic RTL & Localization (LQA) Consultant

Remote (GMT+2) | randamco101@gmail.com | +20 101 880 2418 | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Product Designer and Bilingual (Arabic/English) Localization Consultant. Experience designing high-density software systems, responsive product interfaces, and right-to-left (RTL) localization systems. Background includes resolving font-rendering and UI-mirroring issues, and complete Arabic translation and LQA support for a title with **1,000,000+ downloads**. Work spans product design, frontend implementation, and Arabic typography.

CORE COMPETENCIES & TECHNICAL SKILLS

Product & Systems UI/UX: High-Density Dashboards, SaaS Interfaces, Offline-First POS Systems, Role-Based Access UI (Waiter/Cashier/KDS/Admin), Information Architecture, Wireframing, Interactive Prototyping.

Product & App Design: Cross-Platform Interfaces (Desktop to Mobile), Component-Based Design Systems, Responsive Layout, Frontend Implementation.

Arabic RTL & Localization QA (LQA): Bidirectional (BiDi) UI Mirroring, Arabic Typography & Glyph Shaping, Diacritics & Script Connectivity, Text Overflow Prevention, In-Game String Localization, Thermal Receipt Layout Constraints.

Tools & Technologies: Penpot, Figma, Design System Tokens (CSS Custom Properties), Front-End.

FEATURED CASE STUDIES & PROJECTS

OneBit Adventure — Solo Translation & Localization QA (LQA)

1,000,000+ DOWNLOADS

Steam LQA Project

- Delivered end-to-end Arabic translation and LQA for a retro turn-based dungeon crawler with over 1M+ global players.
- Diagnosed and resolved pixel-engine font rendering bugs where Arabic text displayed backwards, disconnected, and misaligned.
- Collaborated directly with the lead developer to implement proper glyph shaping, vertical glyph positioning, and custom diacritic handling on a pixel-art grid.
- Restructured in-game UI containers to prevent localized text truncation while keeping Western numerals (1, 2, 3) in combat logs for readability.

RMS Portal & POS — Full Restaurant Management System

FUNCTIONAL PROTOTYPE

rms.yousifbadr.workers.dev

- Designed an offline-first restaurant management system spanning Waiter, Cashier, Kitchen Display System (KDS), and Admin flows, built for order entry during high-volume service periods.
- Designed role-based system flows and authentication states for Waiter, Cashier, KDS, and Admin roles, including PIN-lock staff login and node-lock license validation.
- Built a 2-page Arabic proof-of-concept to test bidirectional mirroring, side panel alignment, and thermal printer receipt margin legibility.

Random's Player — High-Density Audio & Streaming Suite

PRODUCTION CODE & PROTOTYPE

randam.yousifbadr.workers.dev

- Designed and coded a dark-mode audio player from concept to functional frontend, handling streaming state, drag-and-drop queue reordering, and repeat/volume controls.
- Built dense multi-select batch actions — sequential downloads and bulk playlist additions — across card grids and search results.
- Adapted the full layout from a high-density desktop view down to a single-column mobile screen, using local storage instead of a login system or backend.

PROFESSIONAL EXPERIENCE

Independent Product Designer / LQA Consultant

Remote | 2023 - Present

- Consult game studios, indie developers, and SaaS companies on interface design, design systems, and Arabic RTL implementation.
- Audit software and game builds for localization readiness, resolving layout clipping, awkward word wraps, and broken script connections before release.
- Build interactive HTML/CSS prototypes and design systems with token-based architecture for developer handoff.

LANGUAGES & SPECIALIZATION

- **Arabic:** Native (Expert in Classical, Modern Standard, and Gaming Terminology)
- **English:** Full Professional Proficiency (Technical & Creative Localization)
